ComicCraft

AI Comic Story Creator Using Gemini Models

1. Project Overview

ComicCraft is an AI-powered web application that transforms a user's simple story idea into a structured comic. It uses Google Gemini models to generate the title, characters, plot, scenes, dialogue, narration, and image-generation prompts for comic panels.

2. Project Objective

The main objective is to make comic creation easier for students, writers, creators, and beginners by automating story development and converting ideas into organized comic panels.

3. Key Features

• AI story generation

• Character creation and descriptions

• Scene and panel generation

• Character dialogue and narration

• AI image-generation prompts

• Comic panel editing

• Comic preview/viewer

• Export and sharing support

4. System Workflow

User Story Idea → ComicCraft Frontend → Backend API → Google Gemini Model → Story & Character Generation → Scene/Panel Generation → Image Prompts → Comic Viewer → Export/Share

5. Technology Stack

Layer	Technology
Frontend	React.js, JavaScript, HTML/CSS, Tailwind CSS
Backend	Node.js, Express.js
AI	Google Gemini API
Database	Firebase or MongoDB
Deployment	Vercel / Firebase / Google Cloud

6. Example

User Input: Create a superhero comic about a college student who discovers a mysterious power.

Generated Comic: The AI creates a title, introduces the student and other characters, develops the mystery, divides the story into panels, and generates dialogue and visual prompts for each panel.

7. Expected Output

A complete structured comic containing a title, character information, story plot, multiple panels, dialogue, narration, and artwork prompts. The final interface should allow the user to preview and export the generated comic.

8. Future Enhancements

• Multiple comic art styles

• Voice narration

• Character consistency across panels

• Multilingual comic generation

• PDF/image export

• User accounts and saved comics

• Social sharing

9. Conclusion

ComicCraft demonstrates how generative AI can simplify creative storytelling. By combining a modern web interface with Gemini-based content generation, the project provides an accessible workflow for creating original comic stories from simple user ideas.
